The following is an examiner's statement of reasons for allowance:

The prior art fails to disclose a method of enhanced biomarker detection using data directed mass filtering, which includes means for measuring elution times for a second separation run of ions to determine whether they fall within at least one a priori determined retention time interval for ions of interest so only ions of interest are filtered and passed from an ion filter into an ion trap to notch out portions of the mass spectrum corresponding to undesired ions as recited in claims 1 and 5; or means for filtering out undesired ion species with an ion filter by ejecting undesired ion species which fall outside at least one a priori retention time interval corresponding to only desired ion species to provide a tailored biomarker mass spectrum for a predetermined biomarker pattern as recited in claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
